...for indoors

WAGNER

InlineRoller - internally fed Paint Roller system

Rolling

easily with Airless technique

Paint is delivered automatically from the drum to the paint roller by an airless diaphragm or piston pump. Without dragging buckets about or dipping into them. This is convenient and efficient e.g. when working on facades from scaffolding. The InlineRoller is more economical than any manual roller and the paint distribution is much more uniform.

Integral tool for opening the paint distributor when fitting and removing the paint roller and for cleaning.

High quality padded, woven plush paint roller, also for facades.

The patented paint distributor contains closed cavities to reduce weight.

Practical hanging facility for the roller on the scaffolding thanks to the shaped neck.

The system can be completely dismantled without tools. For **simple changing** of the extension, easy cleaning or convenient transport.

Light

weight thanks to the hollow aluminium design.

Handy: thanks to the swivel-joint between handle and extension the roller can always be used in the most comfortable working position.

Feed control handle with 2-finger trigger: ergonomically matched to fit the hand.

Versatile flexible hose whip (including scaffolding hook) with a large radius of action for **efficient** working. Depending on the paint and the supply pump, high-pressure hoses up to 100 metres long can be connected.

Basic equipment

InlineRoller

- Plush fabric roller 13 mm pile
- Roller frame
- Paint distributor
- Extension 50 cm with swivel joint
- Feed control
- 7,5 m hose whip
- Double fitting for connecting high pressure hose
- Scaffolding hook

Best-Nr. 0345 010

The original packaging can be used as a storage and a transport box. This means you always have the roller system conveniently to hand.
